Task 1 (Easy): Salary Transformation System

Problem Description

A company stores employee salaries in a list. Increase each salary by 10% and print the updated salaries using functional transformation techniques.

Input Format

- First line contains integer N.
- Second line contains N space-separated integers.

Output Format

Print updated salaries.

Constraints

- $1 \leq N \leq 10^5$

Sample Input

```
5
1000 2000 3000 4000 5000
```

Sample Output

```
1100 2200 3300 4400 5500
```

Program:

```
import java.util.*;

import java.util.stream.Collectors;

public class Labtask1 {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();

        List<Integer> salaries = new ArrayList<>();

        for (int i = 0; i < n; i++) {

            salaries.add(sc.nextInt());

        }

        List<Integer> updatedSalaries = salaries.stream()

            .map(salary -> salary + (salary * 10 / 100))

            .collect(Collectors.toList());
```

```
        updatedSalaries.forEach(salary -> System.out.print(salary + " "));  
    }  
}
```

Output:

The screenshot shows an IDE terminal window with the following content:
